1. Letter from the Executive Board

Dear Delegates,

We are very pleased to welcome you to the simulation of UNCSW at OakJMUN 2026. It will be an honour to serve on your Executive Board for the duration of the conference. This Background Guide is designed to give you an insight into the case at hand. Please refer to it carefully. Remember, a thorough understanding of the problem is the first step to solving it.

However, remember that this Background Guide is in no way exhaustive and is only meant to provide you with enough background information to establish a platform for beginning the research. Delegates are highly recommended to do a good amount of research beyond what is covered in the Guide. The guide cannot be used as proof during the committee proceedings under any circumstances.

Finally, we would like to wish you luck in your preparation. In case you have any questions, procedural or otherwise, please feel free to direct them to any member of the Executive Board and we will get back to you as soon as possible. Please do not hesitate to contact us with any queries or concerns. We expect all delegates to be well-versed with the various nuances of the agenda and geared up for an intense debate, deliberations, and great fun.

We are looking forward to meeting you at the conference!

Regards,

Rishika Agrawal
Chair

Snigdha Kurra
Vice Chair

Anahita Nair
Vice Chair

2. MUN Rules Of Procedure (ROP)

1. Roll Call

- The Chair calls on each country to declare if they are "Present" or "Present and Voting." It refers to the voting procedure on the Draft Resolution, where a delegate can vote "Yes", "No", or opt to "Abstain".
- If "Present and Voting," the delegate cannot abstain from voting. If the delegate chooses to respond with "Present", they may answer with "Present and Voting" on subsequent days, but this is not permissible for "Present and Voting" as this reply must be used consistently from that point forth.

2. Setting the Agenda

- Delegates motion to set the agenda, followed by a formal debate on which topic to discuss first. This motion requires a simple majority to pass.

3. Speakers' List

- After passing a motion to enter formal debate, delegates are placed on a speakers' list to make formal speeches. Time limits are set, and the Chair calls on delegates to speak in order.
- A delegate must raise their placard if they wish to add their name to this list. They can be on this list only once on any occasion.

4. Points

- **Point of Order:** To correct a procedural error by the Chair.
- **Point of Personal Privilege:** For personal discomfort (e.g., if the room is too cold, or if a fellow delegate cannot be heard).
- **Point of Inquiry:** To ask questions about discussion or statements in committee.
- **Point of Parliamentary Inquiry:** To ask questions with regard to the Rules of Procedure.

5. Motions

- **Motion to Suspend the Meeting:** To break for caucuses or adjourn the session.
- **Motion to Close Debate:** Ends the discussion on a topic and moves to voting. Requires a two-thirds majority.
- **Motion to Table the Topic:** Postpones debate on a topic. Requires a majority vote.

6. Yields

- **Yield to the Executive Board:** A delegate yields their remaining time from their speech to the Executive Board. It is to be used as they see fit.
- **Yield to Another Delegate:** A delegate yields their remaining time for another delegate to speak. (This delegate's permission must be sought beforehand.)
- **Yield to Points of Information:** A delegate yields their remaining time to Points of Information to the committee.
- **Yield to Comments:** A delegate yields their remaining time to comments from the committee.

7. Caucuses

- **Moderated Caucus:** The Chair controls the speaking order with shorter, focused speeches. The topic selected is a narrowed version of the agenda, chosen by the delegate who proposed the moderated caucus.
- **Unmoderated Caucus:** Informal discussion among delegates not under the moderation of the Executive Board.

8. Draft Resolutions and Amendments

- Delegates collaborate to create draft resolutions, which are formal solutions to the discussed issue.
- **Friendly Amendments:** Accepted by all sponsors without a vote.
- **Unfriendly Amendments:** Need to be voted on to be added.

9. Voting

- **Procedural Votes:** Includes motions and amendments; all members must vote.
- **Substantive Votes:** For resolutions and unfriendly amendments; only "Present and Voting" delegates may vote, and abstentions are allowed.

3. Points to Remember

A few aspects that delegates should keep in mind while preparing:

3.1 Procedure

The purpose of putting in procedural rules in any committee is to ensure a more organised and efficient debate. The committee will follow the UNA-USA Rules of Procedure. Although the Executive Board shall be fairly strict with the Rules of Procedure, the discussion of the agenda will be the main priority. So, delegates are advised not to restrict their statements due to hesitation regarding the procedure.

3.2 Foreign Policy

Following the foreign policy of one's country is the most important aspect of a Model UN Conference. This is what essentially differentiates a Model UN from other debating formats. To violate one's foreign policy without adequate reason is one of the worst mistakes a delegate can make.

3.3 Role of the Executive Board

The Executive Board is appointed to facilitate debate. The committee shall decide the direction and flow of the debate. The delegates are the ones who constitute the committee and hence must be uninhibited while presenting their opinions or stance on any issue. However, the Executive Board may put forward questions and/or ask for clarifications at all points in time to further debate and test participants.

3.4 Nature of Source and Evidence

This Background Guide is meant solely for research purposes and must not be cited as evidence to substantiate statements made during the conference. Evidence or

proof for substantiating statements made during the formal debate is acceptable from the following sources:

- **United Nations:** Documents and findings by the United Nations or any related UN body are held as credible proof to support a claim or argument.
- **Multilateral Organisations:** Documents from international organisations like the OIC, NAFTA, SAARC, BRICS, EU, ASEAN, the International Criminal Court, etc. may also be presented as credible sources of information.
- **Government Reports:** These reports can be used in a similar way as the State-operated news agency reports and can, in all circumstances, be denied by another country.
- **Reuters:** Any Reuters article that clearly makes mention of the fact, or is in contradiction of the fact, being stated by a delegate in the council.
- **State-operated News Agencies:** These reports can be used in support of or against the State that owns the news agency. These reports, if credible or substantial enough, can be used in support of or against any country as such, but in that situation may be denied by any other country in the council. Some examples are RIA Novosti (Russian Federation), Xinhua News Agency (People's Republic of China), etc.

4. Committee Background

The United Nations Commission on the Status of Women (CSW) is a functional commission of the Economic and Social Council (ECOSOC), established on 21 June 1946. It is the UN's principal intergovernmental body dedicated to promoting gender equality and the empowerment of women. UN Women, established in 2010, supports the CSW's work and coordinates UN efforts towards gender equality.

The CSW brings together Member States, UN entities and civil society organisations to discuss challenges affecting women and girls. It meets annually in New York to review progress, identify emerging issues and develop international policies. Each session focuses on a priority theme while reviewing progress on a previously discussed issue.

The CSW's work is guided by international commitments, including the Beijing Declaration and Platform for Action, adopted in 1995. Its discussions address a wide range of issues, from women's participation in public life to emerging challenges

arising from technological developments. The Commission's 2023 session specifically examined innovation, technological change and education in the digital age, highlighting both the opportunities technology creates and the inequalities it may reinforce.

5. Mandate

The United Nations Commission on the Status of Women (CSW) is the UN's principal intergovernmental body dedicated to advancing gender equality, promoting women's rights and empowering women and girls. It reviews progress on international commitments, identifies policy gaps and recommends measures to address challenges faced by women.

Through its annual sessions, the CSW debates and adopts Agreed Conclusions containing global policy recommendations and may consider draft resolutions and declarations. For example, its 2021 session focused on women's participation in public life and the elimination of violence, while its 2025 session addressed access to justice for women and girls. Although the CSW is an official policy-making body within the UN system, its outcomes are generally non-binding and cannot be enforced through national laws or sanctions.

What This Means for Your Resolution

Instead, the CSW encourages governments to implement its recommendations and promotes international cooperation. Under the present agenda, delegates should propose practical solutions to online harassment and gender-based abuse while protecting women and girls in digital spaces and safeguarding their freedom of expression.

6. Agenda Overview

Agenda: Protecting Women's Freedom of Expression while Combating Online Incitement, Harassment and Gender-Based Abuse

The internet has become an important part of everyday life, allowing women and girls to share their opinions, access information, participate in public discussions and raise awareness about social issues. Social media platforms have created new opportunities for women to participate in journalism, politics, education and activism. However, these spaces can also expose them to harassment, threats, false information, the sharing of private details and harmful content created using artificial intelligence (AI).

Online abuse can have serious consequences beyond the digital world. It may affect a person's safety and well-being, damage their reputation and discourage them from expressing their views publicly. When women are repeatedly targeted or threatened, they may choose to stop posting online or withdraw from public discussions altogether. This limits their ability to participate freely in society.

Addressing this issue requires a careful balance between protecting individuals from abuse and safeguarding freedom of expression. While measures against harmful online behaviour are necessary, poorly designed rules may also be used to silence criticism or restrict genuine opinions. Governments, social media companies and international organisations therefore have an important role in finding fair and effective solutions.

This agenda focuses on understanding the different forms of online abuse faced by women and girls, examining the responsibilities of governments and digital platforms, and exploring how international cooperation, effective policies and greater public awareness can help create safer online spaces without unnecessarily restricting freedom of expression.

7. Understanding Online Harassment and Gender-Based Abuse

The internet has become an important part of everyday life. Social media platforms allow women and girls to share their opinions, connect with others, raise awareness about social issues and participate in public discussions. However, these platforms can also be used to target, threaten or silence them.

Online harassment includes repeated unwanted messages, bullying, threats, spreading rumours and sharing someone's private information without permission. Gender-based abuse refers to harmful behaviour directed at someone because of their gender. When these actions take place through social media, messaging

applications, websites or other digital tools, they can form part of what is known as technology-facilitated violence against women and girls.

This abuse can take many forms. A woman who speaks about politics may receive threatening messages because of her opinions. A student may be bullied online because of gender stereotypes. A journalist reporting on a sensitive issue may be targeted by several accounts at once. In some cases, private photographs or personal details are shared to frighten, embarrass or control someone.

Online abuse can have effects beyond the internet. It may affect a person's confidence, privacy, education, work and sense of safety. Some women may stop posting their opinions, avoid discussing public issues or leave online platforms to protect themselves. This can reduce their participation in journalism, politics, education and other areas of public life.

It is also important to understand that not every disagreement, negative comment or criticism is gender-based abuse. People should be able to disagree with one another respectfully. The concern arises when behaviour becomes threatening, discriminatory, invasive or intended to intimidate and silence someone.

Key Framework: CEDAW (1979)

The **Convention on the Elimination of All Forms of Discrimination against Women (CEDAW)**, adopted in 1979, requires countries that are parties to the Convention to take action against discrimination towards women. Although it was adopted before social media became widespread, its principles are relevant when considering how countries should protect women's rights in the digital world.

UN Women has also studied technology-facilitated violence against women and highlighted the need for better data, prevention and support. Understanding the different forms of abuse is an important first step towards creating effective policies.

8. Protecting Freedom of Expression in the Digital World

Freedom of expression is the right to hold opinions and share ideas and information. It allows people to discuss public issues, question decisions made by those in power and express views that may differ from those of others. The internet has made this

right especially important by giving women and girls more opportunities to participate in public discussions.

For example, women use social media to discuss unequal treatment, raise awareness about violence, report discrimination and campaign for changes in laws and policies. Online platforms can help people whose opinions might otherwise receive little attention reach a much larger audience.

However, freedom of expression can come into conflict with efforts to prevent online abuse. Governments may introduce rules to control harmful content, and social media companies may remove posts that violate their policies. These actions can help protect users, but rules that are too broad or unclear may also lead to legitimate opinions being removed.

For instance, a post criticising a government policy should not automatically be treated as harmful simply because it is controversial. On the other hand, a message that threatens a person or encourages violence raises different concerns. The content, context and possible harm must be considered before deciding how to respond.

Key Framework: UDHR and ICCPR

The **Universal Declaration of Human Rights (UDHR)**, adopted in 1948, recognises freedom of opinion and expression under Article 19. The **International Covenant on Civil and Political Rights (ICCPR)**, adopted in 1966, also protects freedom of expression under Article 19. Article 20 requires countries to prohibit certain forms of advocacy of national, racial or religious hatred that amount to incitement to discrimination, hostility or violence.

These international standards show that protecting freedom of expression and preventing serious harm must be considered together. Restrictions on speech must meet applicable legal requirements and should not be used as an excuse to silence criticism or limit women's participation in public life.

The challenge is to ensure that measures against online abuse are clear, fair and proportionate. People who report harassment should have access to protection, while people expressing lawful opinions should not be unfairly punished.

9. Online Hate Speech, Incitement and Coordinated Attacks

Online abuse does not always take the form of a direct threat. It can also involve hateful messages, discriminatory language, repeated attacks and attempts to encourage others to target a person. Understanding the differences between these actions is important when developing effective policies.

9.1 Hate Speech

Hate speech generally refers to communication that attacks, insults or discriminates against people based on characteristics such as gender, race, religion or other aspects of their identity. There is no single definition of hate speech that applies across every international legal context, so its meaning and legal consequences depend on the relevant rules and circumstances.

9.2 Incitement

Incitement involves encouraging, provoking or urging others to commit harmful acts. Under Article 20 of the ICCPR, certain advocacy of national, racial or religious hatred that constitutes incitement to discrimination, hostility or violence must be prohibited by law. Not every offensive statement meets this standard, and the context of a statement matters when assessing it.

9.3 Coordinated Attacks

Another concern is the use of coordinated online attacks. These occur when multiple accounts target the same person or group, sometimes by posting similar messages, spreading rumours or repeatedly reporting their content. Such attacks can overwhelm victims and make online participation difficult.

Women in public-facing roles, including journalists, activists, politicians and human rights defenders, may be especially affected because their work often involves discussing controversial issues. If online attacks discourage them from speaking publicly, society loses important voices and perspectives.

The spread of false information can make the situation worse. Misleading claims about a woman may be shared widely before they can be corrected. Even when the information is later disproved, the damage to her reputation or safety may remain.

Key Frameworks: UN Strategy on Hate Speech and the Rabat Plan

The **UN Strategy and Plan of Action on Hate Speech**, launched in 2019, provides a framework for the United Nations' work on preventing and responding to hate speech while protecting human rights. The **Rabat Plan of Action**, developed in 2012, offers guidance for assessing when advocacy of hatred reaches the level of incitement that requires a legal response.

Possible responses include better systems for reporting abuse, clear platform rules, action against accounts that repeatedly violate those rules and public education about responsible online behaviour. Responses must still distinguish between criticism, offensive content, harassment and unlawful incitement.

10. The Role of Governments and Social Media Companies

Making online spaces safer requires cooperation between governments, technology companies, civil society organisations and the public. Each has different responsibilities, and no single group can solve the problem alone.

10.1 Governments

Governments can establish laws and policies that protect privacy, address threats and provide ways for victims to seek help. They can also support digital literacy programmes, strengthen access to justice and work with other countries when abuse crosses national borders. However, laws should be clearly written and applied fairly so that they do not become tools for suppressing criticism or restricting women's participation in public life.

10.2 Social Media Companies

Social media companies also play an important role because they control the platforms on which much online abuse takes place. They can establish clear rules against harassment, make reporting systems easier to use, explain why content has been removed and provide ways to appeal decisions. They can also improve their systems for responding to complaints and identifying repeated abusive behaviour.

For example, if a user receives repeated threats, a platform should provide a clear way to report the account and explain what action may be taken. If a post is

removed, the platform should communicate the reason wherever possible and offer an appropriate review process. At the same time, platforms should avoid removing lawful content simply because it expresses an unpopular opinion.

10.3 International Cooperation

International cooperation is especially important because a person posting abusive content may live in a different country from the person being targeted. Different legal systems, languages and levels of technological development can make these cases difficult to address.

> **Key Framework: UN Guiding Principles on Business and Human Rights**
>
> The **UN Guiding Principles on Business and Human Rights**, endorsed in 2011, explain that businesses have a responsibility to respect human rights and address harmful impacts connected to their activities. These principles are useful when considering the responsibilities of technology companies and the effects their decisions can have on users.

Governments and platforms can also consider privacy protections, transparent complaint systems and clear explanations of their rules. Regular reviews can help identify weaknesses in existing policies and ensure that protections are applied fairly.

11. Artificial Intelligence, Privacy and New Forms of Abuse

Artificial intelligence (AI) is increasingly used to create images, videos, voices and written content. These tools can support education, communication and creativity, but they can also be misused to target women and girls.

One example is a **deepfake**, which is an image, video or audio recording created or changed using AI to make it appear that someone said or did something they never actually said or did. Such content can be used to embarrass, threaten or damage a person's reputation. AI can also be used to imitate someone's identity, create misleading messages or produce large numbers of abusive comments.

Another concern is the sharing of private information without permission. This may include personal photographs, phone numbers, home addresses or other details that could put someone at risk. Once this information spreads online, it may be difficult to remove completely.

These problems raise important questions about privacy, consent and accountability. Who should be held responsible when AI is used to create harmful content? What should platforms do when someone reports a fake image or impersonation? How can victims receive help when the person responsible is anonymous or lives in another country?

Possible measures include improving systems for reporting manipulated content, making it easier to request the removal of harmful material, strengthening privacy protections and teaching people how to recognise misleading information. Technology companies can also develop safeguards to reduce the misuse of their tools.

Key Framework: Global Digital Compact (2024)

The **Global Digital Compact**, adopted by UN Member States in 2024 as part of the Pact for the Future, sets out a shared vision for international digital cooperation. It recognises the importance of human rights and a safer digital environment. Although it does not specifically regulate every form of AI-generated abuse, it provides a broader framework for discussing digital safety and cooperation.

The United Nations has also highlighted concerns about technology-facilitated violence against women and girls, including the ways new technologies can spread harmful content and reinforce discrimination. These developments make it important for countries to review whether existing laws and reporting systems are sufficient.

However, AI-related rules must be carefully designed. Not every AI-generated image or edited video is harmful, and legitimate uses of AI should not be unnecessarily restricted. The focus should be on preventing abuse, protecting people's rights and ensuring that complaints are handled fairly.

Key issue for the committee: How can countries address AI-assisted abuse and protect privacy without unnecessarily restricting useful technology and freedom of expression?

12. Supporting Victims and Building Safer Online Spaces

Preventing online abuse is important, but it is equally necessary to support people who have already experienced it. Women and girls may not report harassment because they fear embarrassment, blame, retaliation or the possibility that their complaints will not be taken seriously. Some may not know where to seek help.

Accessible reporting systems can make a difference. Online platforms should provide clear instructions for reporting threats, harassment, impersonation and the sharing of private information. Where appropriate, they should explain what action has been taken and provide a way to appeal decisions. Victims may also need access to counselling, legal assistance and other support services.

Schools and educational institutions have a role to play as well. Digital literacy programmes can teach students how to protect personal information, recognise misleading content, report abuse and treat others respectfully online. Education should also explain the difference between expressing disagreement and targeting someone through harassment.

Public awareness campaigns can challenge harmful gender stereotypes and encourage people to speak up when they witness abuse. Governments, schools, technology companies and civil society organisations can work together to make these efforts more effective.

12.1 Case Study: Online Violence Against Women Journalists

A global survey conducted by the International Center for Journalists (ICFJ) and supported by UNESCO in 2020 examined online violence experienced by women journalists around the world.

> **Key Finding**
>
> **73%** of the women journalists surveyed had experienced online violence in the course of their work. The survey also found that online attacks could affect their professional activities and their willingness to participate in online discussions.

This example demonstrates that online abuse can affect more than an individual's personal life. When journalists are threatened or intimidated, they may find it harder to report on important issues and share information with the public. Similar

concerns can arise for women human rights defenders, activists and others who speak publicly about social and political matters.

The findings highlight the importance of accessible reporting systems, support for victims, greater awareness and stronger responses from online platforms. At the same time, policies must protect journalists' and other users' freedom to report, question and discuss public issues.

12.2 Links to Sustainable Development Goal 5

These concerns are closely linked to **Sustainable Development Goal 5 (SDG 5): Gender Equality**, which aims to achieve gender equality and empower all women and girls. Target 5.2 calls for the elimination of violence against women and girls in public and private life, while Target 5.1 focuses on ending discrimination. Making digital spaces safer supports these wider goals by helping women participate more freely in society.

The CSW can contribute by encouraging countries to share effective policies, improve public awareness and strengthen support for women and girls affected by online abuse. Since the Commission develops policy recommendations rather than enforcing national laws, practical solutions depend on cooperation between governments, technology companies, educational institutions and civil society.

14. Questions a Resolution Must Answer (QARMA)

1. **Definitions and data:** How will the resolution define online harassment, gender-based abuse and technology-facilitated violence against women and girls so that Member States can apply the terms consistently? What data should be collected on this abuse, and by whom?
2. **Drawing the line:** How will the resolution distinguish gender-based abuse and unlawful incitement from disagreement, criticism and offensive but lawful speech? What tests (content, context, likelihood of harm) should decide when speech may be restricted, in line with Article 19 and Article 20 of the ICCPR and the Rabat Plan of Action?
3. **Safeguards for expression:** What safeguards will ensure that national laws and platform rules against abuse are clear, fair and proportionate, and are not

used to silence criticism, dissent or genuine opinions, including those of women themselves?

4. **Coordinated attacks and women in public life:** How will coordinated attacks, such as multi-account targeting and mass reporting, be identified and addressed? What additional protection should be offered to women journalists, activists, politicians and human rights defenders, and how should the resolution respond to false information that targets them?
5. **Responsibilities of governments and platforms:** What should Member States be expected to do (legislation, access to justice, privacy protection, digital literacy), and what should social media companies be expected to do (clear rules, accessible reporting, explanations for removals, appeals, action against repeat offenders)? How can the UN Guiding Principles on Business and Human Rights support this, and how will platforms be discouraged from removing lawful content simply because it is unpopular?
6. **AI, deepfakes and privacy:** How will the resolution address deepfakes, AI-enabled impersonation and the non-consensual sharing of private information? Who is responsible when AI is used to create harmful content, and how can rules be designed without restricting legitimate uses of AI, building on the Global Digital Compact?
7. **Cross-border cooperation:** How will the resolution handle cases where the abuser and the victim are in different countries, with different legal systems, languages and levels of technological development, including anonymous perpetrators? How will governments, technology companies, educational institutions and civil society be encouraged to cooperate?
8. **Victim support, prevention and review:** What support (counselling, legal assistance, accessible reporting) will be available to victims, and how will the resolution address fears of blame and retaliation? What role should schools, digital literacy programmes and awareness campaigns play in prevention? How will progress be measured and reviewed against SDG 5, particularly Targets 5.1 and 5.2?
